

# movepro360<sup>®</sup>

stay ahead of your mobility program through a single source of truth

We have built MovePro360<sup>®</sup> alongside clients to provide the industry's first truly holistic user experience, offering clients comprehensive views of their entire relocation program while integrating data from key suppliers—a true single source of truth. By providing multichannel access to live move status, the platform empowers HR and mobility managers to intervene in real time to positively affect the outcome for individual employees.

- Solution-focused design thinking
- Cloud- and API-based framework
- Predictive business logic
- User-driven innovation and iteration
- Secure and compliant environment

MovePro360 forms the foundation of our dynamic suite of digital tools to help you and your employees navigate the entire relocation journey with ease and confidence.

“Cartus’ technology is forefront for us. It is really something that we have focused on for a couple of reasons. We want to make sure that we are capturing the data correctly, and in real-time to help us. Secondly, we must tell a story with our data. It’s important for me to have the right data points so that I can put that data together in a story that my leaders can resonate with.”

—Multinational Insurance Company

seamless user experience

extensive integrations

comprehensive data for advanced analytics

actionable reporting

## key capabilities

MovePro360 eliminates uncertainty and increases productivity by allowing clients easy access and management of all aspects of their global mobility program on one single platform.

- Benefits Builder—our core/flex solution supporting employee or company-choice mobility programs
- Configurable company program dashboards providing a complete view of employee move status/milestones with cost details
- Aggregate program views of all active moves for costs by country, policy, or departure/destination location
- Dynamic employee move risk indicator with predictive algorithm
- Real-time sentiment tracking and notifications
- Multi-language integrations (English, French, German)

## reporting and secure connectivity

- Advanced reporting and analytics for easy configuration and access to overall business insights and costs
- Secured access through single sign-on and multi-factor authentication capabilities
- Modern authorization tool utilizing APIs and type-ahead prompts
- Enhanced connectivity through supplier integrations

“One of the biggest factors that led to Salesforce selecting Cartus as our fully outsourced global relocation partner is their innovative in-house technology. As a tech company ourselves, Salesforce needs a provider who can offer flexible, intuitive technology tools to make sure we’re providing our employees with what they need to move successfully; and our internal global mobility team with what we need to manage cases and develop policies and processes that fit our culture and business needs. The solutions that Cartus provides are just stellar—really top-notch—and truly beyond anything else that we have seen.”

—Sandy Beyer, Senior Manager, Global Mobility, Salesforce
